

## Adrian Lamande

Adrian came to the sustainability field via a genuine passion for Australian native plants. He initially ran his own native landscaping business and, as his career progressed, he developed skills in field and project management. He has since worked on many major restoration ecology projects for public and private clients. Since working for himself, he has been involved in many major weed eradication programs including the Falls Creek Hawkweed and Willow project for Parks Victoria, and the Lobed Needle Grass eradication program for Department of Primary Industries (DPI). He specialises in Grassland Restoration Ecology - an area in which he has a genuine passion - and hopes to continue to contribute to the preservation, restoration, and sustainability of the nation's grasslands for future generations.
